Content Studio V2 - Ready for Testing + Important Updates

Hi Gita,

Great news - Content Studio V2 is now fully functional and ready for your testing!

What Happened (Security Context)

Due to recent security incidents affecting Revolut and Railway, we had to perform a comprehensive security audit of the entire application. This required significant changes:

- Migrated sensitive API keys from frontend to secure backend
- Implemented Supabase Edge Functions for all AI service calls (MuAPI, OpenAI)
- Removed hardcoded credentials from the codebase
- Added proper authentication for all API routes

These security improvements caused temporary disruptions, but the system is now more secure and stable.

Current Capabilities

Video Generation (MuAPI + Veo 3.1):

- Upload 1-2 photos → AI generates 8-second cinematic video
- First photo = start frame, Second photo = end frame (smooth transition)
- OpenAI enhances your prompts automatically
- 3 aspect ratios: 9:16 (vertical), 16:9 (horizontal), 1:1 (square)
- Background music (5 tracks available)
- Export to MP4 via Remotion Lambda

Video Duration - Current Limitation & Alternatives

Veo 3.1 generates **8-second clips maximum**. Here are all available AI video models:

Model	Duration	Quality	API Available	Cost
Veo 3.1 (current)	8 sec	⭐⭐⭐⭐⭐	Yes (MuAPI)	~$0.50
Runway Gen-3 Alpha	10 sec	⭐⭐⭐⭐⭐	Yes	~$0.50
Kling 2.0 (Kuaishou)	5-10 sec	⭐⭐⭐⭐	Yes	~$0.30
Luma Dream Machine	5 sec	⭐⭐⭐⭐	Yes	~$0.30
Minimax Video-01	6 sec	⭐⭐⭐⭐	Yes	~$0.25
Hailuo AI	6 sec	⭐⭐⭐⭐	Yes	~$0.20
Pika 2.0	5 sec	⭐⭐⭐	Yes	~$0.20

Note: TikTok/ByteDance models (Jimeng AI, PixelDance) are NOT publicly available - they're internal or research-only.

Our Recommendation

Keep Veo 3.1 as primary (best quality for villa/property videos) and for longer videos use **multi-clip stitching**:

1. Generate multiple 8-second clips with different photos (bedroom, pool, exterior, etc.)
2. Remotion automatically stitches them into one seamless video
3. Result: Professional 30-60 second promotional video

This approach gives you the **best quality** while achieving **any duration** you need.

Next Steps

1. Your Testing (Now) - MINIMUM 3-4 VIDEOS

Please generate **at least 3-4 complete videos** to validate everything works:

Suggested tests:

- 1 photo upload → vertical video (9:16) for Instagram/TikTok
- 1 photo upload → horizontal video (16:9) for YouTube/Website
- 1 photo upload → square video (1:1) for Instagram Feed
- 2 photos upload → test the smooth transition between start and end frame

For each video:

- Upload photo(s)
- Select aspect ratio
- Generate video (~2-3 min)
- Download MP4
- **Verify: Does the video match YOUR uploaded photo(s)?**

2. Improvements Coming

- Voice Over / TTS integration (using your PROMPT LIST OPTION voice scripts)
- Additional music tracks from Google Drive
- Multi-clip workflow UI for longer videos
- Performance optimizations

How to Test

1. Go to Content Studio V2
2. Upload 1 or 2 villa photos
3. Select aspect ratio (16:9, 9:16, or 1:1)
4. Click Generate Video (takes ~2-3 minutes)
5. Download the final MP4
6. **Verify the video shows YOUR photos, not AI-invented images**

Looking forward to your feedback on all tests!

Best, The Dev Team
